RAILWAYS RESERVATION SYSTEM

of

COMPUTER SCIENCE

PRINCIPAL **SUBJECT TEACHER**

ACKNOWLEDGEMENT

I would sincerely like to thank my teacher

MR. TARUN YADAV

for providing us invaluable guidance, support & encouragement

in making & in completion of this project. I am also thankful for her Critical Reasoning.

I would also like to thank our respected principal

MR. R. N. CHAUHAN

for providing us with the required platform and facilities to undertake this project of

PYTHON

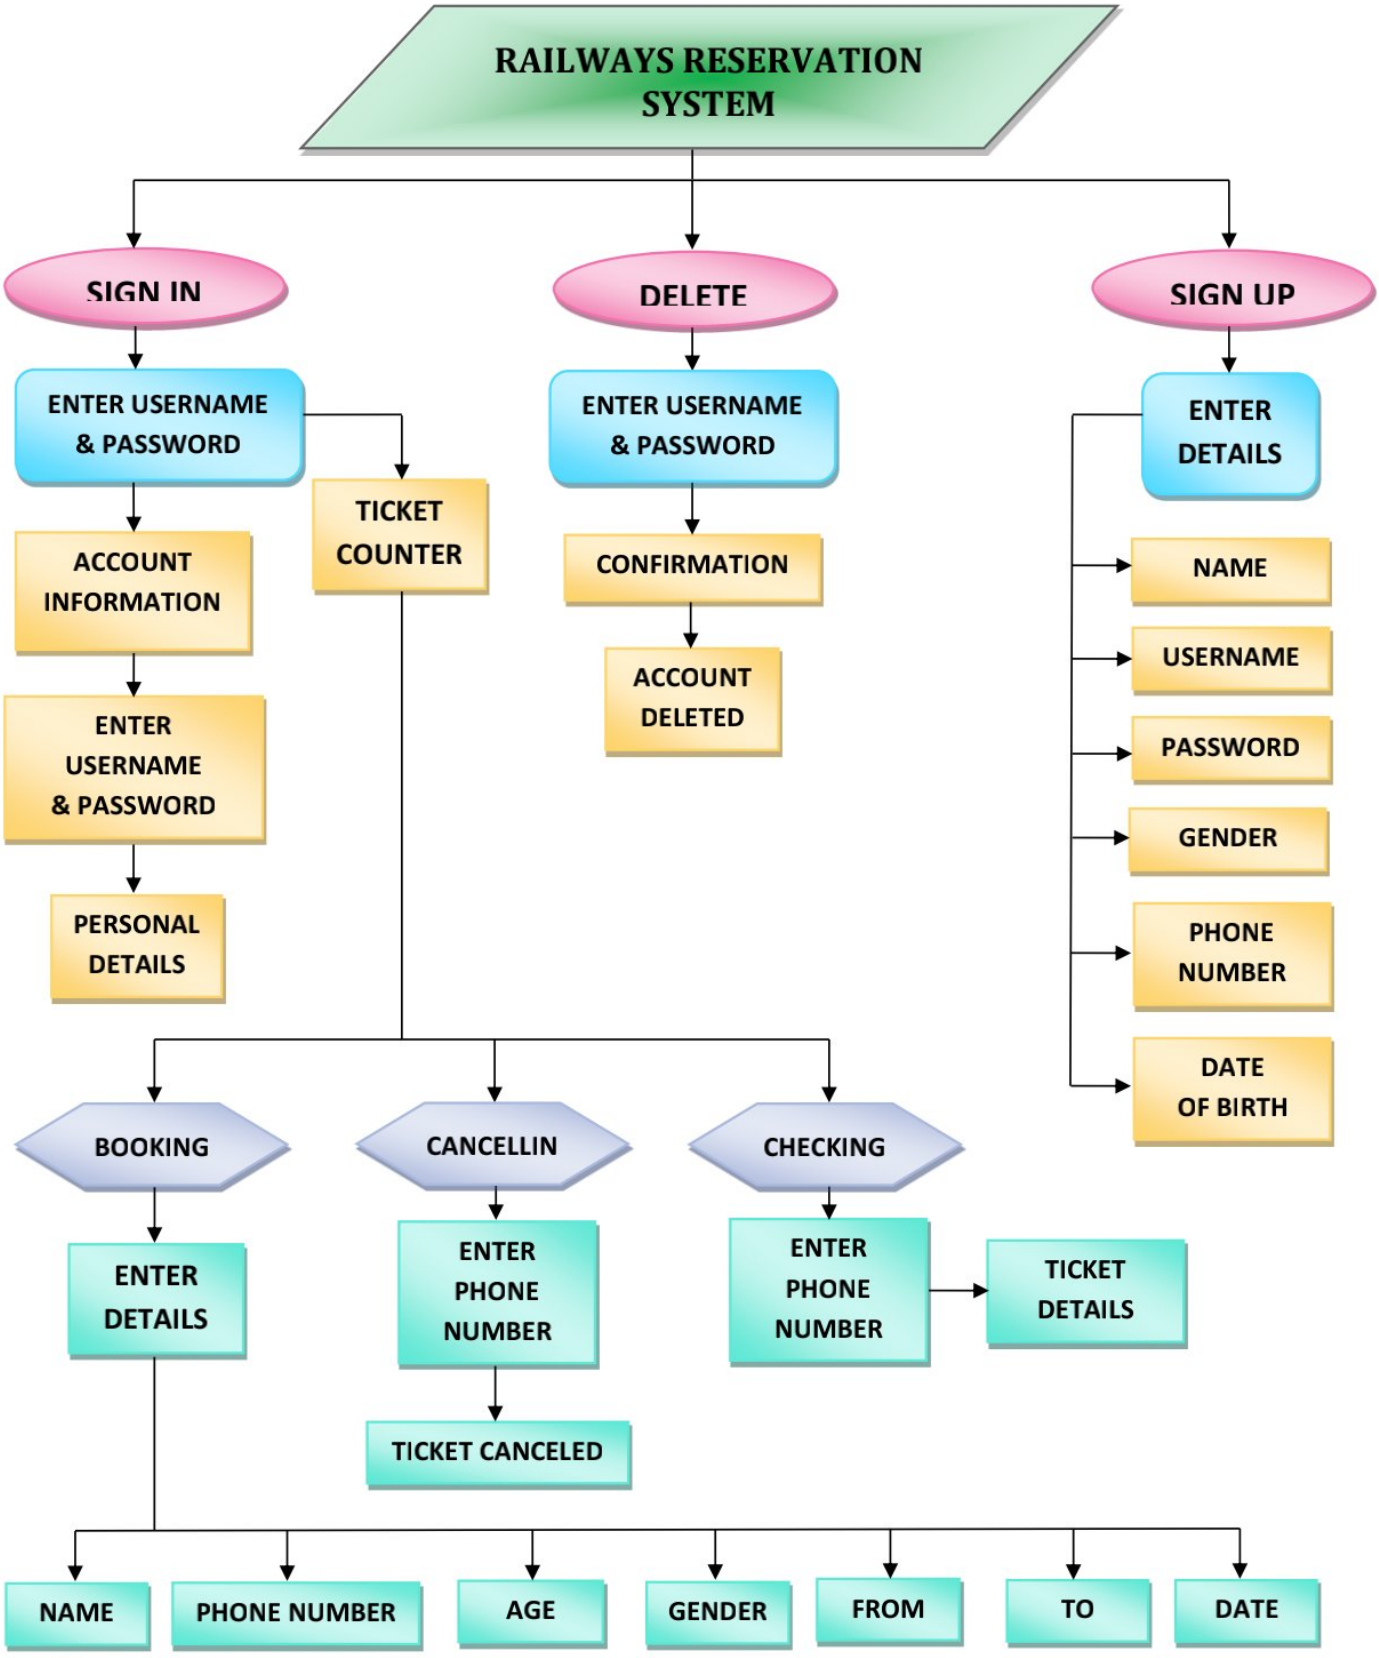

on topic

RAILWAY RESERVATION SYSTEM.

ABSTRACT

The project talks about the railway reservation system. It is an integrated system where the customer is entitled to book a reservation when he/she wants to avail the services of railways. The individual can book a rail reservation if there is a need to travel from one place to another. The project allows to store the details of the customer and simultaneously stores the record in the database. At the time of booking the customer avails for the source and the destination cities.

SOURCE CODE

CONNECTING MYSQL WITH PYTHON:

```
def connection():
    import mysql.connector
mycon=mysql.connector.connect(host='localhost',user='root',passwd='password',datab
ase='railway')
    if mycon.is_connected():
        print("Successfully Connected")
connection()
```

CREATING DATABASE:

```
def Create_Database_Railway():
    import mysql.connector
    mycon=mysql.connector.connect(host='localhost',user='root',passwd='password')
    cursor=mycon.cursor()
    mycon.autocommit=True
    s1="create database railway"
    cursor.execute(s1)
Create_Database_Railway()
```

CREATING TABLES:

```
def table_creation_railway():
    import mysql.connector
    mycon=mysql.connector.connect(host='localhost',user='root',passwd='password',
database='railway')
    cursor=mycon.cursor()
    mycon.autocommit=True
```

```
    s1="create table railway(name varchar(100),phno varchar(15)  primary key,age
int(4),gender varchar(50),from_f varchar(100),to_t varchar(100),date_d varchar(20))"
    cursor.execute(s1)
table_creation_railway()

def table_creation_user_accounts():
    import mysql.connector
    mycon=mysql.connector.connect(host='localhost',user='root',passwd='password',
database='railway')
    cursor=mycon.cursor()
    mycon.autocommit=True
    s1="create table user_accounts(fname varchar(100),lname varchar(100),user_name
varchar(100) ,password varchar(100) primary key, phno varchar(15),gender
varchar(50),dob varchar(50),age varchar(4))"
    cursor.execute(s1)
table_creation_user_accounts()
```
